Supervisor: Mr. Jyoti Priyo Khanra

Department Of Computer Science & Engineering

Budge Budge Institute Of Technology, Kolkata

July 15 , 2026

OBJECTIVE

- The main objective of our project (Eduverse) is to develop a unified digital platform that combines an online e-book store and an e-learning system to make education more accessible, interactive, and engaging.
- The platform aims to provide students, teachers, and readers with a seamless experience where they can purchase and read books, enroll in online courses, and track their learning progress.
- Eduverse seeks to promote digital literacy and bridge the gap between traditional learning and modern technology through a user-friendly and scalable web solution.

Problem Statement

- In today's world, online learning and digital reading platforms are increasing rapidly, but most of them are separated — e-learning platforms focus only on video-based education, while e-book platforms only provide reading material.
- Students and readers often need to switch between multiple applications to access study materials, courses, and books. This causes inconvenience, data loss, and a lack of a unified learning experience.
- Additionally, traditional education systems still depend heavily on physical books and offline classes, making learning less flexible, especially for remote learners.

Key Features

- Eduverse has been designed with multiple interconnected modules that together form a complete digital learning and reading ecosystem.
- Each module focuses on a specific functionality to enhance the user experience and ensure smooth operation of the platform — from user authentication to course management and e-book purchases.
- User Authentication, E-Book Store, E-Learning, Progress Tracking, Admin Panel, Search & Filtering, Payment Integration, Feedback & Review, Notification, and Responsive UI Modules.

Technology Stack

- Eduverse uses a modern and robust technology stack to ensure smooth performance, scalability, and user-friendly experience. The frontend is built with React.js
 - The backend uses Node.js to handle APIs, authentication, and business logic.
 - The database uses MySQL for secure and efficient data storage.
- Frontend: React.js
 - Backend: Node.js
 - Database: MySQL .

Future Scope / Enhancements

- AI Tutor: Personalized guidance & real-time doubt resolution.
- Advanced Analytics: Track student progress, engagement, and learning patterns
- Intelligent Chatbots: Instant support for queries, FAQs, and course navigation.
- Payment Integration: Secure in-app payments for courses & e-books.
- Gamification & Rewards: Badges, leaderboards, and achievement tracking.

References

- YouTube: For practical tutorials and implementation guidance.
- Google: For exploring development references and troubleshooting.
- Official Documentations: React, Node.js and My SQL, for accurate technical implementation.

Conclusion

- Complete Learning Ecosystem: Eduverse integrates e-books, courses, quizzes, and interactive tools in a single platform for a seamless learning experience.
- Enhanced User Engagement: Personalized dashboards, progress tracking, bookmarks, and highlights make learning interactive and motivating.
- Accessibility & Convenience: Responsive design ensures smooth usage across desktop, tablet, and mobile, allowing learning anytime, anywhere.
- Designed for All Learners: Supports students, instructors, and lifelong learners with collaborative features like forums and peer discussions.
- Future-Ready & Scalable: Plans for AI tutors, advanced analytics, intelligent chatbots, payment integration, and gamification make Eduverse adaptable and innovative.

THANK YOU
